

**Riley Daniel Schmidt** was born on Aug 25th, 2009 with End Stage Renal Disease and has been on dialysis since 6 months old. At this time, Riley is taking many medications in order for the kidney to function a little until he receives a kidney transplant. Only four days old he received his first surgery. A vesicostomy had been performed, in order to allow him to urinate freely through the stomach. This reduced the reflux to his kidneys and allow them to rest. He then received multiple surgeries and had been given both a Broviac Catheter, as well as a Peritoneal Dialysis Catheter so labs could be drawn regularly without having to stick him with needles. Riley spends 9 hrs a day on dialysis every day. In order for Riley to receive his transplant, he needs to be 10kg, roughly about 23 pounds because only adult kidneys may be transplanted. Daniel, Riley's, father, will be tested so he can donate one of his kidneys for his son. With this being said, Dad will be out of work for quite some time recovering from a major surgery, and Riley will need to be

evaluated in Philadelphia 3 days a week post op to make sure his body accepted the transplant. A benefit will be to help defray cost the parents will have with only one parent working, and traveling to Philadelphia three times a week and Dad at home recovering. The parents have medical expenses now for Riley and those expenses will increase greatly after surgery. Riley's parents, Daniel and Monica Schmidt, also have 2 other daughters to care for as well, Hailey age 7 and Lily age 5. Your help with "Riley's Road To Recovery" will surely get Riley and his parents on their "Road to Recovery". All donations would be greatly appreciated.
